TECHNICAL SKILLS

Languages: Python, JavaScript, SQL, HTML5, CSS3
Frameworks & Tools: Django, Flask, REST APIs, Git, GitHub
Databases & Design: PostgreSQL, SQLite, Figma (Prototyping)

PROJECTS

- SipSetu — Recruitment & Full-Stack Platform** May 2026
- Architected robust relational database models using PostgreSQL to securely manage application data flow.
 - Developed scalable backend RESTful API endpoints using Python and Django to power dynamic components.
 - Designed high-fidelity, interactive user interface blueprints in Figma to map user journeys seamlessly.
- AI-Powered Resume Analyzer** April 2026
- Built a comprehensive web architecture featuring specialized workflows for both applicants and recruiters.
 - Implemented text processing services in Flask to parse, process, and analyze structure from raw PDF uploads.
 - Leveraged precise team Git collaboration practices and branch management to safely deploy application features.

EXPERIENCE

- Software Engineering Intern — Tech Solutions Inc.** June 2025 – August 2025
- Teamed with senior core engineers to deploy backend API solutions built entirely on top of Python integrations.
 - Drafted structural unit tests that minimized standard runtime deployment application issues by roughly 15%.
 - Navigated agile sprint standups and synchronized structural team technical architecture using upstream Git frameworks.

EDUCATION

- Bachelor of Science in Computer Science** Expected Graduation: May 2027
XYZ University — Focus Areas: Relational Databases, Design Framework Prototyping, and Object-Oriented Logic
